Contents

1	Review of Linear Algebra	9
1.1	Definitions	9
1.2	Linear Transformations	9
1.3	Matrix Arithmetic	10
1.4	Eigenvalues and Eigenvectors	11
1.5	Exercises	12
2	Ray Optics	13
2.1	Introduction	13
2.2	Ray Optics and Fermat's Principle	13
2.3	Fermat's Principle: Examples	14
2.4	Paraxial Rays	16
2.5	Matrix Optics	17
2.6	Composite Systems	21
2.6.1	Example: Thin Lens	21
2.7	Resonator Stability	22
2.7.1	Stability Condition	23
2.7.2	Periodic Motion	24
2.7.3	Resonator Stability: Standard Form	25
2.8	Exercises	27
3	Fourier Analysis	35
3.1	Periodic Functions: Fourier Series	35
3.1.1	Example: Rectified Sine Wave	37
3.2	Aperiodic Functions: Fourier Transform	37
3.2.1	Example: Fourier Transform of a Gaussian Pulse	39
3.3	The Fourier Transform in Optics	39
3.4	Delta Function	41
3.5	Exercises	43
4	Review of Electromagnetic Theory	45
4.1	Maxwell Equations in Vacuum	45
4.2	Intensity	46
4.3	Maxwell Equations in Media	46
4.4	Simple Dielectric Media	47
4.5	Monochromatic Waves and Complex Notation	48
4.6	Intensity in Complex Notation	49
4.6.1	Complex Notation for Simple Dielectric Media	50
4.7	Plane Waves	50
4.8	Vector Plane Waves	52
4.8.1	Wave Impedance	53

4.9	Exercises	53
5	Interference	57
5.1	Superposition of Two Plane Waves	57
5.2	Mach-Zehnder Interferometer	58
5.3	Stokes Relations	59
5.4	Mach-Zehnder Interferometer: Applications	60
5.5	Michelson Interferometer	60
5.6	Sagnac Interferometer	62
5.7	Interference of Two Tilted Plane Waves	62
5.8	Multiple-Wave Interference	63
5.9	Exercises	63
6	Gaussian Beams	65
6.1	Paraxial Wave Equation	65
6.2	Gaussian Beams	66
6.2.1	Amplitude Factor	67
6.2.2	Longitudinal Phase Factor	68
6.2.3	Radial Phase Factor	69
6.3	Specification of Gaussian Beams	70
6.4	Vector Gaussian Beams	70
6.5	ABCD Law	71
6.5.1	Free-Space Propagation	72
6.5.2	Thin Optic	72
6.5.3	Cascaded Optics	73
6.5.4	Factorization of a General Matrix	73
6.5.5	“Deeper Meaning” of the ABCD Law	74
6.5.6	Example: Focusing of a Gaussian Beam by a Thin Lens	74
6.5.7	Example: Minimum Spot Size by Lens Focusing	74
6.6	Hermite–Gaussian Beams	76
6.6.1	Doughnut Mode	77
6.7	Exercises	77
7	Fabry–Perot Cavities	83
7.1	Resonance Condition	83
7.2	Broadening of the Resonances: Cavity Damping	84
7.2.1	Standard Form	85
7.2.2	Maximum and Minimum Intensity	85
7.2.3	Width of the Resonances	86
7.2.4	Survival Probability	86
7.2.5	Photon Lifetime	87
7.2.6	Q Factor	87
7.2.7	Example: Finesse and Q	88
7.3	Cavity Transmission	88
7.3.1	Reflected Intensity	89
7.3.2	Intracavity Buildup	90
7.4	Optical Spectrum Analyzer	90
7.5	Spherical-Mirror Cavities: Gaussian Modes	92
7.5.1	Physical Modes	93
7.5.2	Symmetric Cavities	93
7.5.3	Special Cavities	93
7.5.4	Resonance Frequencies	94
7.5.5	Algebraic Digression	95

7.6	Spherical-Mirror Cavities: Hermite–Gaussian Modes	95
7.6.1	Confocal Cavity	96
7.7	Exercises	96
8	Polarization	101
8.1	Vector Plane Waves	101
8.2	Polarization Ellipse	101
8.2.1	Simple Cases	102
8.3	Polarization States: Jones Vectors	104
8.3.1	Vector Properties	105
8.4	Polarization Devices: Jones Matrices	105
8.4.1	Linear Polarizer	106
8.4.2	Wave Retarder	106
8.4.3	Polarization Rotator	108
8.4.4	Cascaded Systems	108
8.5	Coordinate Transformations	108
8.6	Normal Modes	110
8.7	Polarization Materials	110
8.7.1	Birefringence	110
8.7.2	Optical Activity	112
8.8	Exercises	113
9	Fresnel Relations	115
9.1	Optical Waves at a Dielectric Interface	115
9.1.1	Phase Changes and the Brewster Angle	118
9.2	Reflectance and Transmittance	119
9.3	Internal Reflection	120
9.3.1	Phase Shifts	122
9.4	Air-Glass Interface: Sample Numbers	123
9.5	Reflection at a Dielectric-Conductor Interface	125
9.5.1	Propagation in a Conducting Medium	125
9.5.2	Inductive Heating	127
9.5.3	Fresnel Relations	129
9.6	Exercises	130
10	Thin Films	133
10.1	Reflection-Summation Model	133
10.1.1	Example: Single Glass Plate as a Fabry–Perot Etalon	135
10.2	Thin Films: Matrix Formalism	136
10.3	Optical Coating Design	139
10.3.1	Single-Layer Antireflection Coating	139
10.3.2	Two-Layer Antireflection Coating	140
10.3.3	High Reflector: Quarter-Wave Stack	141
10.4	Exercises	142
11	Fourier Analysis II: Convolution	143
11.1	Spatial Fourier Transforms	143
11.2	Convolution	143
11.2.1	Example: Convolution of Box Functions	144
11.3	Convolution Theorem	144
11.3.1	Example: Convolution of Two Gaussians	145
11.4	Application: Error Analysis	146
11.5	Application: Central Limit Theorem	147

11.5.1	Central Limit Theorem Application: Random Walk	148
11.5.2	Central Limit Theorem Application: Standard Deviation of the Mean	149
11.6	Application: Impulse Response and Green's Functions	149
11.7	Application: Spectral Transmission	151
11.8	Exercises	152
12	Fourier Optics	155
12.1	Fourier Transforms in Multiple Dimensions	155
12.2	Wave Propagation	155
12.2.1	Fingerprints of Propagation	155
12.2.2	Decomposition	156
12.2.3	Fourier-Transform Recipe	156
12.2.4	Paraxial Propagation	157
12.2.5	Nonparaxial Propagation and the Diffraction Limit	157
12.3	Fraunhofer Diffraction	158
12.3.1	Far-field Propagation	158
12.3.2	Thin Lens as a Fourier Transform Computer	159
12.3.3	Example: Diffraction from a Double Slit	160
12.3.4	Example: Diffraction from a Sinusoidal Intensity-Mask Grating	161
12.3.5	Example: Diffraction from an Arbitrary Grating	162
12.4	Fresnel Diffraction	162
12.4.1	Convolution Revisited	162
12.4.2	Impulse Response	163
12.4.3	Far-Field Limit	163
12.4.4	Example: Fresnel Diffraction from a Slit	164
12.5	Spatial Filters	165
12.5.1	Spatial Filtering of a Gaussian Beam	168
12.5.2	Visualization of Phase Objects	170
12.5.2.1	Zernike Phase-Contrast Imaging	170
12.5.2.2	Central Dark-Ground Method	171
12.5.2.3	Schlieren Method	171
12.5.2.4	Numerical Examples	174
12.6	Holography	176
12.6.1	Example: Single-Frequency Hologram	177
12.6.2	Film Holograms	177
12.6.3	Hologram of a Plane Wave and Off-Axis Holography	178
12.6.4	Setup: Off-Axis Reflection Hologram	179
12.7	Exercises	179
13	Acousto-Optic Diffraction	183
13.1	Raman-Nath Regime	184
13.1.1	Diffraction Amplitudes: Bessel Functions	186
13.1.2	Frequency Shifts	188
13.1.3	Momentum Conservation	188
13.2	Bragg Regime	189
13.2.1	Efficiency	195
13.2.2	Example: TeO ₂ Modulator (Bragg Regime)	195
13.3	Borderline	196
13.4	Exercises	196
14	Coherence	199
14.1	Wiener-Khinchin Theorem	200
14.2	Optical Wiener-Khinchin Theorem	201

14.2.1	Application: FTIR Spectroscopy	202
14.2.2	Example: Monochromatic Light	202
14.3	Visibility	203
14.4	Coherence Time, Coherence Length, and Uncertainty Measures	204
14.5	Interference Between Two Partially Coherent Sources	206
14.6	Exercises	206
15	Laser Physics	207
15.1	Overview	207
15.1.1	Laser Pumps	207
15.1.2	Gain Media	207
15.1.2.1	Gas-Phase Atoms	208
15.1.2.2	Atoms Embedded in Transparent Solids	208
15.1.2.3	Molecules	208
15.1.2.4	Semiconductor Lasers	209
15.1.3	Optical Resonator	209
15.1.4	A Simple Model of Laser Oscillation: Threshold Behavior	209
15.1.5	A Less-Simple Model of Laser Oscillation: Steady-State Oscillation	210
15.2	Light–Atom Interactions	211
15.2.1	Quantization	211
15.2.2	Fundamental Light–Atom Interactions	212
15.2.3	Einstein Rate Equations	213
15.2.4	Relations Between the Einstein Coefficients	214
15.2.5	Line Shape and Spectral Distributions	214
15.2.5.1	Broadband Light	215
15.2.5.2	Nearly Monochromatic Light	215
15.3	Light Amplification	216
15.3.1	Gain Coefficient	216
15.3.1.1	Stimulated Emission	216
15.3.1.2	Absorption	217
15.3.1.3	Spontaneous Emission	217
15.3.1.4	Combined Effects	217
15.3.2	Threshold Behavior and Single-Mode Operation	217
15.4	Pumping Schemes	219
15.4.1	Three-Level Laser	219
15.4.2	Four-Level Laser	221
15.5	Gain Coefficient	222
15.5.1	Gain in a Medium of Finite Length	224
15.6	Laser Output: CW	225
15.6.1	Optimum Output	225
15.6.2	Quantum Efficiency	226
15.7	Laser Output: Pulsed	227
15.7.1	Laser Spiking	227
15.7.2	Q-Switching	228
15.7.3	Cavity Dumper	229
15.7.4	Mode Locking	230
15.8	Exercises	231
16	Dispersion and Wave Propagation	239
16.1	Causality and the Kramers–Kronig Relations	239
16.1.0.1	DC Component	241
16.1.1	Refractive Index	241
16.1.1.1	Example: Lorentzian Absorption	242

16.2	Pulse Propagation and Group Velocity	243
16.2.1	Phase Velocity	243
16.2.2	Group Velocity	243
16.2.3	Pulse Spreading	245
16.3	Slow and Fast Light	247
16.3.1	Quantum Coherence: Slow Light	248
16.3.2	Fast Light	249
16.4	Exercises	250
17	Classical Light–Atom Interactions	253
17.1	Polarizability	253
17.1.1	Connection to Dielectric Media	254
17.1.2	Conducting Media: Plasma Model	255
17.2	Damping: Lorentz Model	255
17.2.1	Oscillator Strength	257
17.2.2	Conductor with Damping: Drude Model	258
17.3	Atom Optics: Mechanical Effects of Light on Atoms	258
17.3.1	Dipole Force	259
17.3.1.1	Dipole Potential: Standard Form	260
17.3.2	Radiation Pressure	261
17.3.2.1	Dipole Radiation	262
17.3.2.2	Damping Coefficient	264
17.3.2.3	Photon Scattering Rate	264
17.3.2.4	Scattering Force	266
17.3.3	Laser Cooling: Optical Molasses	266
17.3.3.1	Doppler Cooling Limit	267
17.3.3.2	Magneto-Optical Trap	269
17.4	Exercises	270

Classical and Modern Optics - free book at E-Books Directory. You can download the book or read it online. It is made freely available by its author and publisher. - InTech Holographic Materials and Optical Systems covers recent research achievements in the areas of volume holographic optical elements and systems, development of functionalized holographic recording materials, and applications in holographic imaging. (2907 views). Color and Its Applications by Matthew Luckiesh - D. Van Nostrand company The book presents a condensed treatment of the science of color. An attempt has been made to cover as many phases of the subject as possible within the confines of a small volume. The science of color is treated from the viewpoint of applications. Focuses on fundamental concepts and modern, real-world applications. Takes applications from fundamental, experimental, and applied physics; astrophysics and cosmology; geophysics, oceanography, and meteorology; biophysics and chemical physics; engineering and optical science and technology; and information science and technology. Emphasizes the quantum roots of classical physics and how to use quantum techniques to elucidate classical concepts or simplify classical calculations. Features hundreds of color figures, some five hundred exercises, extensive cross-references, and a detailed index. Title: Modern classical physics : optics, fluids, plasmas, elasticity, relativity, and statistical physics / Kip S. Thorne and Roger D. Blandford. Description: Princeton : Princeton University Press, 2017. | Includes bibliographical references and index. Identifiers: LCCN 2014028150 | ISBN 9780691159027 (hardcover : alk. paper) | ISBN 0691159025 (hardcover : alk. paper) Subjects: LCSH: Physics. Classification: LCC QC21.3 .T46 2015 | DDC 530dc23 LC record available at <https://lcn.loc.gov/2014028150> British Library Cataloging-in-Publication Data is available This book has been composed in MinionP
