Wendy Cope 1945

This book describes ocular diseases with a brief summary and then gives the treatment. It notes the precautions to be taken in: treatment, and a paragraph at the end comments on the prognosis. At the end of each disease there is a list of references. There are 411 contributors, some experts in their field, and others unknown, but included because they have written an article on an obscure disease. The disadvantage of the book is that the diseases are not listed in alphabetical order but under systems.
