Official web site for Statistics for Experimenters. Statistics for Experimenters Second Edition by George Box, Stu Hunter and William Hunter was published in 2005. This site is a resource for that readers of that book. "Catalyzing innovation, problem solving, and discovery, the Second Edition provides experimenters with the scientific and statistical tools needed to maximize the knowledge gained from research data, illustrating how these tools may best be utilized during all stages of the investigative process. The authors' practical approach starts with a problem that needs to be solved and then examines the appropriate statistical methods of design and analysis. Add to this ideas like those in Churchman's *Design of Inquiring Systems* (1971). Bastick's data-based synthetic theories [*How We Think and Act* (1982)]. and the newer work of Pribram. and a reader could have a solid grounding in the scholarship and science that makes Riedel's ideas come alive.
