UNIVERSITY OF SOUTH AFRICA

PROMOTER: DR E M GERICKE

JOINT PROMOTER: PROF M P MACHET

NOVEMBER 2005

SUMMARY

This study examines the efficacy of collection development and management practices, policies, guidelines and standards in universities of technology to meet the information needs of academics and researchers at such institutions. In South Africa, as in Australasia, technikons or polytechnics have been upgraded first into degree granting institutions and then, at the beginning of the 21st century, into universities of technology. The researcher was concerned that library collections in South African universities of technology have not grown to meet the research and teaching needs of academics at the level of universities offering instruction up to a doctoral level. As research funding, government grants and the general prestige of the institutions depend on the research output of the institutions, it is essential that academics and researchers find the information resources they require in their institutional libraries. Case studies of universities of technology in New Zealand and South Africa reveal that, while Auckland University of Technology has been successful in extending its collection to meet the increasing demands placed on it, the collection development policies, standards and guidelines in a South African university of technology need to be upgraded in order to meet the information needs and information behaviour of their researchers and academics. Current levels of funding for the acquisition of information resources in South Africa lag behind those found at the New Zealand university of technology. The university of technology that was the object of the South African case study needs to bring its collection in line with that of similar institutions worldwide. This entails adapting goals and objectives stating how the collection is to develop, evaluating the collection and the needs of users, changing the Collection Development Policy to reflect the direction collection development will take and ensuring that the institution and the government back this project financially. To this end, a model Collection Development Policy has been drawn up that can be adapted to the local requirements of South African universities of technology to assist with the process of developing and managing library collections that will be worthy of such an institution.

Key terms:

University of technology libraries; Collection development policies; Information needs; Information behaviour; Auckland University of Technology; Scholarly communication; Materials budgets; Library collection size; Traditional information resources; Digital information resources; Library funding.

FOREWORD

To Heather Jenks and other members of staff from the Auckland University of Technology, I offer my sincere thanks for all the time and effort you put into ensuring that I received the information I required as quickly and thoroughly as possible. This study would have been impossible without your friendly and professional assistance.

To senior members of staff at the South African university of technology, thank you very much for all the assistance and information you gave me that enabled me to carry out the case study. Your willingness to help and your time and effort are deeply appreciated.

To my husband, Pieter, thank you for your support, constant flow of tea, proofreading and encouragement throughout this study. Without you, this would have been Eric, the Half-a-Thesis.

To my promoters, Dr Gericke and Prof Mchet, I offer my sincere thanks for all the advice, encouragement and assistance. Your intellectual input and technical guidance were invaluable.

To the Unisa Library, and to Mrs Tucker in particular, thank you for reacting so swiftly to every request I sent your way. Your friendly competence is much appreciated.

ACRONYMS USED

ACLS - American Council of Learned Societies
ACRL – Association of College & Research Libraries
AHCI – Arts & Humanities Citation Index
ALA – American Library Association
ARL – Association of Research Libraries
AUT – Auckland University of Technology
CAUL – Council of Australian University Libraries
CCD – Collaborative Collection Development
CCI – Current Collecting Intensity
CDP – Collection Development Policy
CMC – Computer-Mediated Communication
DCI – Desired Collection Intensity
DOI – Digital Object Identifier
E-book – Electronic Book
ECS – Existing Collection Strength
E-journal – Electronic Journal
Email – electronic mail
E-resource – Electronic Resource
EWU – East Washington University
FTE – Full-Time Equivalent
GAELIC - Gauteng and Environs Library and Information Consortium
HDI – Historically-Disadvantaged Institution
HEQC - Higher Education Quality Committee
HTML – Hypertext Markup Language

TABLE OF CONTENTS

	Page
Summary	ii
Foreword	iii
Acronyms used	iv
List of Tables	xv
List of Figures	xv
Chapter 1 Introduction	1
1.1 Background to the problem	1
1.2 Statement of the problem	3
1.3 Purpose of the study	5
1.4 Assumptions	5
1.5 Definition of terms	6
1.5.1 University of technology	6
1.5.2 Collection development	7
1.5.3 Collection management	9
1.5.4 Information needs	11
1.5.5 Information behaviour	13
1.5.6 Information-seeking behaviour	13
1.6 Limitations and delimitation of the study	14
1.7 Importance of the study	16
1.8 Research procedures	17
1.8.1 Research design	17
1.8.2 Case study methodology	18
1.8.3 Data collection methods	19
1.9 Research programme	20

Chapter 2	Collection development and collection management in academic libraries	21
2.1	Introduction	21
2.2	Factors that influence collection development policies, standards and guidelines	22
2.2.1	Goals of collection development and management	24
2.2.2	Determining user needs	25
2.2.3	Collection development policies	26
2.2.4	International standards for academic libraries	28
2.2.4.1	Standards for collection development budgets	29
2.2.4.2	Standards for collection size	31
2.2.5	Resource sharing	34
2.2.5.1	Collaborative collection development	34
2.2.5.2	Academic library consortia	35
2.2.5.3	Interlending of library material	36
2.2.6	Collection evaluation	37
2.3	Decisions regarding collection development policies, standards and guidelines	40
2.3.1	Responsibility for selection in academic libraries.....	40
2.3.2	Just-in-case model for collection development	41
2.3.3	Just-in-time model for collection development	43
2.3.4	Content-based versus format-based collections	44
2.3.5	Formats in which information is made available	45
2.3.6	Access versus ownership	46
2.3.6.1	Ownership	46
2.3.6.2	Access	48
2.4	Changing trends in collection development and management ...	50
2.5	Conclusion	51

Chapter 3	A profile of academics and researchers as information users	53
3.1	Introduction	53
3.2	Duties and activities of academics	54
3.3	The academic as creator, user and disseminator of information	55
3.4	The academic as teacher	57
3.5	The academic as scholar and researcher.....	59
3.5.1	Gathering scholarly information.....	60
3.5.2	Scholarly writing	61
3.5.3	The academic as researcher	64
3.6	The academic in a technikon or university of technology	67
3.7	Conclusion	69
Chapter 4	Information needs of academics and researchers in institutions of higher learning	71
4.1	Introduction	71
4.2	Reasons for seeking information	73
4.2.1	Information for research	73
4.2.2	Information for teaching and lecturing	74
4.2.3	Information for writing and publishing	74
4.2.4	Other reasons	74
4.3	Need for quick, easy access to information	75
4.3.1	Information overload	77
4.3.2	Need for desktop access to information and library resources	78
4.3.3	Need for gateways and gatekeepers	79
4.3.4	Need for greater awareness of sources and services	80
4.3.5	Training in the use of electronic resources	81
4.4	Contents versus format	82
4.5	Need for traditional media	83
4.5.1	Dependence on journals	84
4.5.1.1	Need for core journals	86

5.2.10	Implications of changes in scholarly communication on collection development	131
5.3	Information-seeking methods used by scholars and researchers ...	132
5.3.1	Browsing	134
5.3.2	Conducting own searches for information	136
5.3.3	Following up citations in bibliographies	136
5.3.4	Using current awareness alerting services	137
5.3.5	Use of e-resources	138
5.3.5.1	Using Online Public Access Catalogues (OPACs)	139
5.3.5.2	Using online databases	140
5.3.5.3	Using informal networked communication channels	141
5.3.5.4	Relationship between IT skills and use of e-resources	142
5.3.6	Information behaviour of humanists	143
5.3.7	Information behaviour of social scientists	145
5.3.8	Information behaviour in the sciences, medical sciences and technology	146
5.4	Channels used by scholars for the transfer of information	147
5.4.1	Own private collections of information resources as information channels	147
5.4.2	The invisible college as information channel	148
5.4.3	Libraries as information channels.....	150
5.4.4	Information channels used in the humanities	151
5.4.5	Information channels used in the social sciences	152
5.4.6	Information channels used in the SMT fields	153
5.5	Resource sharing as a source of scholarly information	154
5.6	Conclusion	155

Chapter 6 Trends in the media used in academic library collections 157

6.1	Introduction	157
6.2	Collection development issues regarding traditional media	158
6.2.1	Developing monographic collections	160

6.2.1.1	Statistics of monographic collections	161
6.2.1.2	Distinctive components of monographic collections	162
6.2.1.3	Book sales	163
6.2.2	Developing collections of serials	164
6.2.2.1	Statistics relating to serials	165
6.2.2.2	Collection development standards and guidelines for serials	167
6.2.2.3	Core collections of serials	168
6.2.3	Developing collections of other traditional media	169
6.3	Collection development issues regarding digital media	170
6.3.1	Selection criteria for digital media	173
6.3.2	Developing CD-ROM collections	174
6.3.3	Developing e-journal collections.....	175
6.3.3.1	Pricing and access models	176
6.3.3.2	Benefits relating to e-journals	177
6.3.3.3	Problems relating to e-journals	178
6.3.4	Developing collections of journal aggregation services	179
6.3.4.1	Benefits relating to aggregation services	180
6.3.4.2	Problems relating to aggregation services	181
6.3.5	Developing e-book collections.....	182
6.3.5.1	Benefits relating to e-books	183
6.3.5.2	Problems relating to e-books	184
6.3.6	Managing Internet resources	185
6.4	Traditional versus digital media	187
6.4.1	Digital libraries	189
6.4.2	Hybrid collections	191
6.5	Conclusion	192

**Chapter 7 Collection development and management at two
 universities of technology – report of case studies 194**

7.1	Introduction	194
7.1.1	Data collection methods used	195
7.1.2	Role of the researcher	196
7.1.3	Reporting style	197

7.2	Historical framework of AUT and XUT and their libraries ...	197
7.2.1	Auckland University of Technology	197
7.2.2	X University of Technology	199
7.3	Goals relating to collection development and management ...	200
7.3.1	Goals at AUT	200
7.3.2	Goals at XUT	204
7.4	Determining user needs	205
7.4.1	Attempts to determine user needs at AUT	206
7.4.2	Attempts to determine user needs at XUT	207
7.5	Collection development policies	208
7.5.1	AUT's collection development policy	209
7.5.2	XUT's collection development policy	212
7.6	Information resources budgets	214
7.6.1	Budgets at AUT	215
7.6.2	Budgets at XUT	220
7.7	Collection size and composition	222
7.7.1	Development of library collection at AUT	222
7.7.1.1	Books	224
7.7.1.2	Non-book materials	227
7.7.1.3	Serials	229
7.7.1.4	Electronic resources	230
7.7.2	Development of the library collection at XUT	235
7.7.2.1	Books	235
7.7.2.2	Non-book materials	236
7.7.2.3	Serials	236
7.7.2.4	Electronic resources	237
7.8	Resource sharing practices and policies	239
7.8.1	Collaborative collection development through consortia	240
7.8.2	Interlending of library material	242
7.9	Collection evaluation	244
7.10	Selectors and collection developers	245
7.11	Just-in-case or just-in-time model of collection development	248
7.12	Access or ownership	249
7.13	Future plans for collection development	252

7.14	Conclusion	254
Chapter 8 Conclusions and recommendations		256
8.1	Introduction	256
8.2	Factors to consider when formulating policies, standards and guidelines for developing and managing collections for researchers and academics in academic libraries	258
8.3	How academics and researchers in universities and universities of technology interact with information	261
8.4	Information needs of academics and researchers	261
8.5	Information behaviour of academics and researchers	264
8.5.1	Scholarly communication	264
8.5.2	Ways in which academics and researchers seek and use information	265
8.6	Collection development issues relating to various types of information media	267
8.6.1	Collection of traditional media	267
8.6.2	Collection of digital media	267
8.7	Comparison between the collection development policies, standards and guidelines of two universities of technology	270
8.7.1	Goals and objectives relating to collection development	270
8.7.2	Ascertaining user needs	271
8.7.3	Collection development policies	272
8.7.4	Budgetary allocations for collection development	273
8.7.5	Collection evaluation	275
8.7.6	Collection size	276
8.7.7	Resource sharing	278
8.7.8	Responsibility for selection	278
8.7.9	Just-in-case or just-in-time model of collection development	279
8.8	Adequacy of collection development policies, guidelines and standards at universities of technology to satisfy the information needs and behaviour of lecturers and researchers	279
8.9	Model CDP for a university of technology	281

8.10	Topics for further research	299
8.11	Conclusion	299

In the social and life sciences, a case study is a research method involving an up-close, in-depth, and detailed examination of a particular case. For example, a case study in medicine may examine a specific patient a doctor treated, and a case study in business might study a particular firm's strategy. Generally, a case can be nearly any unit of analysis, including individuals, organizations, events, or actions. The process of researching and writing a longer essay (2,000–5,000 words) 273. Example essay 275. Self-assessment exercises Glossary Index. I Decide if the following ideas about time management are true or false: (a) Essay deadlines are often several months after the course starts. (b) The best way to plan an assignment is to use some kind of wall chart. (c) Reading and note-making often take longer than writing. (d) The best time to study is after midnight. (e) It's a good idea to make time every day to relax with friends. (t/f) (t/f) (t/f) (t/f) (t/f). In fact, all of these are true except for (d): it's better to study during the day and then get a good night's sleep. The key point is to schedule the work for each task week by Case studies of universities of technology in New Zealand and South Africa reveal that, while Auckland University of Technology has been successful in extending its collection to meet the increasing demands placed on it, the collection development policies, standards and guidelines in a South African university of technology need to be upgraded in order to meet the information needs and information behaviour of their researchers and academics. Current levels of funding for the acquisition of information resources in South Africa lag behind those found at the New Zealand university of technolo...
